

Professional Internship Placements at the RMS

The Royal Microscopical Society is committed to supporting the microscopy, imaging and cytometry community through a variety of different opportunities.

We have been pleased to host 5 Professional Internship Placement students in recent years, providing an opportunity for the students to develop their skills in a new environment. Through this scheme, the Society gains fresh perspectives and ideas, and it results in great projects that benefit both the Society and the community.

Projects completed include:

- [Microscope Activity Kits Scheme Impact report](#)
- [The Facilities Database](#)
- [RMS Website Resource Library](#)
- [mmc2023 Learning Zone Project](#)
- [Hitachi STEM Global Outreach Impact Report](#)

Ideally, an RMS intern would work from the RMS Office, located in Oxford, on a flexible and hybrid working basis. They are supported by the office team as well as the relevant committee or executive member for their project. Our intern becomes a member of the team and experiences a different environment and opportunities.

We have a range of potential projects in the pipeline and can be flexible to the skills and strengths of each individual.

If you have a student in need of an internship, please consider the RMS.
