NIS.ai Workshop: How Can Deep Learning Neural Networks Improve Your Imaging?
MICHAEL JUNIPER

Nikon

Please join us for a workshop on NIS.ai within Nikon's NIS Elements software featuring:

- Denoise.ai: Pre trained deep learning neural network to remove shot noise.
- Enhance.ai: Restore details by training the network using properly-exposed images.
- Segment.ai: Easily train a neural network on your own images to segment objects.
- Clarify.ai: Pre trained neural network to remove out of focus light.
- Convert.ai: Train neural network to convert one signal into another.
