

APEER

From image to information

A ZEISS Initiative

APEER enables you to customize image processing workflows for your specific job.
All the way from image acquisition to reporting.

Follow us on Twitter:

www.appeer.com

From researchers for researchers

Free and open to all

Make your image analysis reproducible for your peers

Share your image processing tasks on APEER and offer a one-click reproduce-option for your readers of your research.

Your entire experiment, managed with one software

Define and execute end to end workflows, from microscope automation to getting results ready for publication.

Leverage your peers' work

Don't reinvent code. Use code that your peers have already shared and create your own software modules using any language of your choice, including Python, Java, and ImageJ scripting.

Share and Collaborate – if you want to

You can choose to share your work with the community or keep it private for personal use.
